## **CLEANING RECOMMENDATIONS FOR REPLICA PLANTS**

### **Light Dirt Accumulation (We suggest future cleaning every six months)**

1. Use magnetic duster or vacuum with brush end to remove all loose dust. For smaller plant material you can also use a hair dryer set on cool to blow off the dust.
2. Apply one treatment of Repla-Clean fabric plant cleaner with spray applicator. Follow directions given.

### **Medium Dirt Accumulation (We suggest future cleaning every four months)**

1. Remove loose dust with magnetic duster, for smaller plant material you can also use a hair dryer set on cool to blow off the dust.
2. Apply one treatment of Repla-Clean fabric plant cleaner with spray applicator. Follow directions given.
3. Apply second treatment of Repla-Clean fabric plant cleaner.

### **Heavy Dirt Accumulation (We suggest future cleaning every one to two months)**

1. Use magnetic duster or vacuum with brush end to remove all loose dust. For smaller plant material you can also use a hair dryer set on cool to blow off the dust. For larger trees you can use compressed air to blow the dust off.
2. Apply two to three treatments of Repla-Clean with spray applicator. Follow directions given.
3. The wet leaves can be hand-wiped after the second application. If plants are extremely dirty (i.e. mixed with grease), they may never come completely clean unless each leaf is individually hand-wiped.

\*Note: Dirt may collect in the center veins of the leaves and on any other area where water or cleaner would naturally drain. It is best to concentrate these areas for a repeat spraying.
